-) REDUNDANT INTERNET ACCESS**
-) DIRECT CONNECT TO THE LIX (LUXEMBOURG INTERNET EXCHANGE)**
-) INHOUSE INTERCONNECTION-MATRIX FOR DATA- AND COLOCATION CENTER BETWEEN MEMBERS VIA COPPER, FIBER AND COAX CABLES.**

BCE is ideally located on the outskirts of Luxembourg City, with a direct access from the motorway, close to the airport (10 min.) and the railway station. Our premises offer a large dedicated access controlled parking, and we can provide office renting facilities, with fully equipped operational work places.

BCE is at the heart of telecommunication operations in Luxembourg. We host most of the domestic and international telecommunication companies operating in Luxembourg and have the status of Internet Service Provider (ISP) in Luxembourg. Our redundant telecommunication circuit entries are split between our two buildings, with redundant separated power and cooling infrastructures. We operate various technologies for our clients, from radio-links to fibre, from copper cables to satellite connections.

Security is of course handled with the most care: camera surveillance controls all accesses to the buildings and the surroundings, as well as all internal locations. Guards are active on site 24h/24h and 7d/7d. And for our clients, our Network Operation Center is reachable for support on a 24h/24h and 7d/7d basis.

DATACENTER DETAILS
