

# Movie2Me

[Zero cost distribution]

As Internet speed evolves, new transfer technologies emerge. The Movie2Me service provides the transfer of video content in best quality at a very high speed.

The new movie delivery system Movie2Me requires no manual interaction, connecting all your companies and clients with a tapeless workflow.

Movie2Me can also be configured as a one time delivery application, connecting your personal hardware to BCE via a fully secured connection.

**Tapeless workflow**

**Faster delivery**

**No quality loss**

**Reduced costs**

## [Occasional delivery]

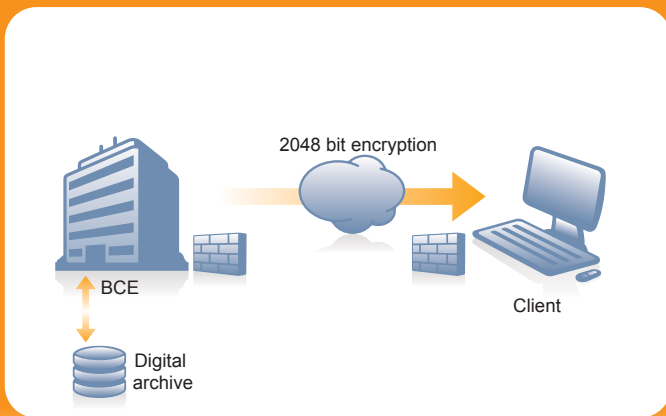

SOFTWARE SOLUTION

Movie2Me is the solution for fast and easy delivery of video content for your company.

All you need is a **PC** running on Linux and an **Internet** connection.

With a secured connection to our facility you are able to receive all the content you need for your business.

Program contribution has never been so **comfortable**, just press the button and receive the videos.

## [Network delivery]

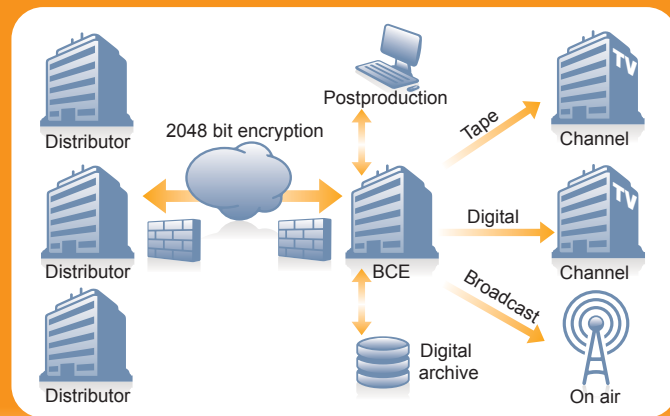

ALL-IN-ONE SOLUTION

Movie2Me is the solution for the global delivery of your movies in the complete **distribution workflow**.

Sending your video content around the world by postal services represents a large amount of money.

Movie2Me is a **tapeless** solution for worldwide movie distribution, fully **automated**, the infrastructure allows **large volume transfers** of your movies in exactly the same quality as the original.

Movie2Me makes your company **gain in quality and effectiveness while reducing your costs**.

### Quick delivery

Movie2Me uses two types of transfer. In normal mode the video is sent as it is, for urgent matters the file is split in blocks, ensuring the maximum use of the bandwidth and a faster transfer.

For example a half hour TV show in top quality can be sent in less than 1 hour.

### No data loss

The video is sent in its original quality or could be transcoded automatically to any existing format.

Our system constantly compares the delivered and sent data and ensures a 100% integrity of the files.

### Secured transfer

Sending a tape by postal services has always been a poorly secured way to send video material. Delays, loss or even robbery can occur.

Movie2Me offers a highly secured solution, with a door to door delivery. The transfer has a 2048 bit encryption with a fixed IP address (allowing only the sender and receiver to have access to the videos).

### Reduced workload

Movie2Me is a completely tapeless system. Fully integrated into your actual workflow, it allows your company to distribute easily the video file among the different departments, from postproduction to broadcasting.

### Zero cost distribution

Distributing your video content with Movie2Me has virtually no cost. The solution is based on file transfer and does not require any human interaction.
